**KEEP OUT OF REACH OF CHILDREN.  
MEDICATED ANIMAL FOOD STUFF. FOR ANIMAL USE ONLY.**

**WHY FEED COPRICE?**

We passionately believe goodness on the inside shows on the outside and most importantly delivers the best results. Every ingredient in CopRice feed is selected for its nutritional value and is developed to meet the specific dietary needs of animals across their life stages. No fillers only 100% goodness ensures your livestock thrive on CopRice.

**COPRICE DAIRY NUTRITION**

Our ruminant nutrition specialists have developed high quality feeds to meet the needs of newborn calves through to high performing cows. Combining Australian cereal grains and rice bran with research-tested nutrition, field-proven studies and industry leading quality assurance programs, we deliver nourishment for optimum health and productivity.

**COPRICE CALF GROWER PELLETS**

A palatable and versatile rearing supplement for feeding with straw, hay and/or other dry forages to meet the specific nutritional requirements of calves 12 weeks to 9 months old. High in quality protein, a balanced calcium and phosphorous ratio, and fortified with trace minerals and vitamins, ensures calves receive the nutrition essential for strong bones, frame and muscle development, whilst supporting immune function through this critical growing period. Added lasalocid sodium helps improve liveweight gains and feed conversion efficiency, and aids in the control of coccidiosis.

**NUTRITION THAT STACKS UP**

**PROTEIN**  
Nutritious soybean and canola meals, lupins and field peas are great sources of bypass protein, which is digested in the small intestine rather than the rumen giving superior nutrient availability. Proteins provide amino acids which contribute to a healthy immune system, and are the building blocks vital for muscle growth and development.

**RICE BRAN**  
Rice bran is highly palatable, rich in digestible fibre, and is a source of nutritious oil which provides an additional energy source to support the growth of healthy calves and heifers. Improving energy availability in the diet can promote protein synthesis to assist immune health and weight gain.

**RICE BRAN OIL**  
Sourced exclusively from Australian bran, CopRice rice bran oil is rich in antioxidants including gamma oryzanol, and is a good source of the omega 3, 6 and 9 essential fatty acids. It also has a role in improving the absorption of fat soluble vitamins.

**MACRO-MINERALS**  
Calcium and phosphorus are critical for strong bones and teeth, and healthy metabolism. Magnesium helps muscle function and may assist in managing stress. Electrolytes including salt, potassium and magnesium, are vital for balancing body fluids and maintaining nervous system health.

**VITAMINS**  
Vitamin A benefits eye health, whilst vitamin D<sub>3</sub> aids calcium absorption. Vitamin C helps support the immune system, whilst vitamin E plays a role in cardiovascular, circulatory and neuromuscular functions. B vitamins are vital for metabolism and the efficient generation of energy for growth.

**STARCH**  
Wholegrain rice is gluten free and a great source of easily digestible starch. Starch is a source of fuel for rumen microbes. It is combined with selected quality wholegrains including wheat, barley and maize, to provide a feed rich in available starch to support calf rumen development and provide optimum energy for growth and weight gain.

**RUMEN BUFFER**  
An effective rumen buffer helps stabilise rumen pH, improving fibre digestion and significantly reducing the risk of acidosis (grain poisoning). Acidosis can reduce feed intake leading to weight loss, it can also compromise energy production and cause permanent rumen damage.

**MOLASSES**  
A versatile ingredient that provides sweetness for improved palatability and encourages feed intake in growing calves. Molasses supports digestion by providing natural sugars as nourishment for the rumen microbe population.

**MICRO-MINERALS**  
Selenium is important for immunity and zinc for tissue repair and health. Copper helps strengthen bones, with manganese assisting cartilage development and reproductive function. Cobalt is a component of vitamin B12 which is required for energy production.

**COCCIDIOSTAT**  
Lasalocid sodium helps improve liveweight gains and feed conversion efficiency. It aids in the control of coccidiosis and reduction of faecal shedding of coccidia *Eimeria spp.*, which if left untreated can result in diarrhoea, dehydration, weight loss and in acute cases death.

Nutritional shares of pellets are approximate only

**INGREDIENTS SELECTED FROM:**

Wholegrain barley, wheat, maize, sorghum, rice, rice bran, bran, soybean meal, lupins, canola meal, field peas, calcium carbonate, dicalcium phosphate, molasses, flavour, rumen buffer, salt, canola oil, vitamin & mineral premix (including vitamin C), lasalocid sodium.

**CONTAINS MEDICATION:**

Contains 250mg/kg Bovatec® 20CC premix to provide 50mg/kg lasalocid sodium for improved liveweight gains and feed conversion efficiency in growing cattle, and as an aid in the control of coccidiosis caused by *Eimeria spp.* Feed 1kg per 100kg calf weight per day to provide 0.5mg/kg liveweight lasalocid sodium per day.

**DAILY FEEDING GUIDE**

FOR CALVES 12 WEEKS TO 9 MONTHS

BODYWEIGHT (kg)	APPROXIMATE FEED PER HEAD/PER DAY (kg)	UNRESTRICTED
75	0.75	Free access to straw, hay and/or other dry forages
100	1.0	
125	1.25	
150	1.5	
175	1.75	
>175	1% Bodyweight	

**FEEDING INSTRUCTIONS:**

- Ensure livestock always have access to clean, cool and fresh water.
- During periods of poor pasture quality additional supplementary feeding will be necessary to achieve liveweight targets.
- CopRice Dairy Calf Grower Pellets are not a complete feed, they are to be fed to calves in conjunction with free access to straw, hay and/or other dry forages.

WITHHOLDING PERIODS: Beef Cattle Meat - Nil, Dairy Cattle Milk - Nil.

**NUTRIENT LEVELS PER kg FEED**

TYPICAL ANALYSIS (ON A DRY MATTER BASIS)		VITAMINS	MACRO-MINERALS	MICRO-MINERALS
Crude Protein	Min. 18%	Vitamin A 6,000 IU	Calcium 14g	Cobalt 1mg
Energy (ME)	Min. 12MJ	Vitamin D <sub>3</sub> 1,800 IU	Magnesium 2.5g	Copper 20mg
Crude Fat	Max. 7%	Vitamin E 20mg	Phosphorus 7g	Iodine 1mg
Crude Fibre	Max. 10%	Vitamin K 1mg	Salt 5g	Iron 30mg
Salt	Max. 1%	Vitamin B1 5mg	Sulphur 2.7g	Manganese 25mg
Calcium	Min. 1.4%	Vitamin B2 2.5mg		Selenium 0.3mg
Phosphorus	Min. 0.7%	Vitamin B3 10mg	<b>FATTY ACIDS</b>	Zinc 90mg
Starch	Min. 36%	Vitamin B5 7mg	Oleic (Omega 9)	
Lasalocid Sodium	50mg	Vitamin B6 1.5mg	Linoleic (Omega 6)	
Urea	Nil	Vitamin B12 15µg	Alpha Linoleic (Omega 3)	
		Folic Acid 0.1mg		
		Biotin 50µg		
		Vitamin C 250mg		

NOTE: If using supplementary selenium do not use at the same time as any other selenised fertiliser, prill or product, and do not exceed the stated dose and frequency without consulting a veterinarian.

**STORAGE CONDITIONS**

Store under cover, off the floor, in a cool, well ventilated and dry area, away from direct sunlight.

**FEED TRANSITION GUIDE**

When changing feeds it is important to do so gradually. To ensure your livestock adjust to different tastes and textures, we recommend a three week transition, as shown below.

**LIFE STAGE FEEDING PROGRAM**
