WHY FEED COPRICE?

We passionately believe goodness on the inside shows on the outside and most importantly delivers the best results. Every ingredient in CopRice feed is selected for its nutritional value and is developed to meet the dietary needs of animals across their life-stages. No fillers only 100% goodness ensures your horses and ponies thrive on CopRice.

COPRICE EXTRUDED EQUINE NUTRITION

High quality ingredients combined with extrusion technology delivers superior digestibility and improved availability of nutrients in every mouthful. Containing no other cereal grains but Australian rice and/or stabilised rice bran, our extruded feeds are gluten free and high fat, satisfying the nutrient requirements of your horse, without any fizzy behaviour.

COPRICE VERSATILE FEED

A unique low starch, nutrient enriched all-round feed, to support the health and vitality of leisure, recreational and spelling horses in light to moderate work. Based on stabilised rice bran and rice it provides a range of essential fatty acids and amino acids including lysine and methionine. Rice bran is also a good source of biotin which is essential for maintaining hooves, and is rich in rice bran oil for a healthy shiny coat.

NUTRITION THAT STACKS UP

PROTEIN

Rice and rice bran contain protein of high biological value, meaning good availability of amino acids for absorption. Rice bran provides essential amino acids such as lysine which is vital for building muscle, and methionine which helps support hoof integrity.

RICE BRAN OIL

Sourced exclusively from Australia, CopRice rice bran oil is full of goodness including natural antioxidants gamma oryzanol and tocopherols, and omega 3, 6 and 9 fatty acids. It is a beneficial energy source that conserves glycogen stores during exercise to delay fatigue and improve stamina, and is great for building topline and muscle definition.

MACRO-MINERALS

Calcium and phosphorus are essential for skeletal development, the maintenance of bones and teeth, and for enzyme regulation and energy production. Electrolytes including salt, potassium and magnesium, have an important role in balancing body fluids, aiding muscle contraction and maintaining nervous system health.

ANTIOXIDANTS

Rice bran oil is naturally rich in antioxidants gamma oryzanol and tocopherols, which help protect cells against oxidative damage. Antioxidants help strengthen the immune system, assist with the recovery of muscular problems such as 'tying up' and may improve reproductive function.

CARBOHYDRATE

Rice is gluten free and one of the best sources of digestible starches of all cereal grains. Rice based feeds are safer to feed with less risk of digestive upsets, for rice is almost entirely digested in the small intestine, rather than fermented in the hindgut.

FIBRE

Fibre is the most important component of a horse's diet aside from water. It is digested by bacteria in the hindgut to provide energy. It keeps horses feeling full and absorbs water to maintain hydration and improve endurance. Insufficient fibre can contribute to behavioural problems e.g. acidosis, gastric ulcers and colic.

MICRO-NUTRIENTS

Micro-nutrients help to activate and mobilise vitamins, minerals, amino and fatty acids, transporting them around the body. Fat soluble vitamins A, D₃ and E are more easily absorbed and stored when the diet contains oil. Water soluble B vitamins are vital for metabolism and energy production.

ORGANIC SELENIUM

The organic form of selenium is incorporated into muscles more effectively and provides better nutrition over inorganic sources. Functioning as a critical component in antioxidant activities, selenium works with vitamin E to provide an effective defence system for cells against oxidative damage.

Nutritional shares of pellets are approximate only

INGREDIENTS SELECTED FROM:

Stabilised rice bran, wholegrain rice, calcium carbonate, molasses, salt, vitamin and mineral premix (including organic selenium), lysine.

May contain traces of oats, maize, wheat and soy as this feed is made in the same mill as other feed containing these ingredients.

DAILY FEEDING GUIDE

SUGGESTED FEEDING RATE (kg/DAY)

BODY WEIGHT (kg)	MAINTENANCE	LIGHT EXERCISE	MODERATE EXERCISE
300	0.1-0.25kg	0.25-0.5kg	1.0-1.5kg
400	0.25-0.5kg	0.5-1.0kg	1.5-2.0kg
500	0.5-1.0kg	1.0-1.5kg	2.0-2.5kg
600	1.0-1.5kg	1.5-2.0kg	2.5-3.0kg

- Feed a minimum of 1% of your horse's body weight daily with high quality roughage such as hay, pasture and/or chaff.
- Total daily feed intake should be 2-3% of body weight, depending on age, workload and climate.
- If feeding over 0.5% body weight per day of extruded feed, divide into two smaller feeds.
- Ensure horses always have access to clean, cool and fresh water.

Suggested feeding rates to be used as a guide only. The amount of feed required will depend on the quality of the pasture/forage, exercise intensity, dentition, metabolism and condition of the horse.

NOTE: If using supplementary selenium do not use at the same time as any other selenised fertiliser, prill or product, and do not exceed the stated dose and frequency without consulting a veterinarian.

STORAGE CONDITIONS: Store under cover, off the floor, in a cool, well ventilated and dry area, away from direct sunlight.
